# Foreword

**Tracy Thomson**  
Founder & Managing  
Director - Finite Group  
tracyt@finite.com.au

As Managing Director of Finite, I am thrilled to present our latest salary guide for the New Zealand and Australian Technology market. The past year has been marked by unprecedented change, and the technology sector has demonstrated its resilience in the face of economic uncertainty.

Looking back at 2022, it's clear that the technology industry continues to experience growth driven by the increasing demand for technology solutions across various industries. However, the shortage of technology talent remains a major challenge, making it increasingly difficult for organisations to find and hire the right professionals with the necessary experience and expertise.

Our salary guide research reveals that salaries in the technology market have seen a significant increase over the past year, driven by the shortage of technology talent and the high demand for certain skills. As a result, many employers are facing a competitive market, and are being forced to rethink their hiring strategies to attract and retain the best candidates. To stand out, employers are offering more competitive compensation packages, including a greater focus on benefits such as flexible and remote working options, career development opportunities, and additional leave. Candidates are placing more value on the benefits package along with their salary.

As the market continues to evolve, it's becoming increasingly important for candidates to stay informed and up-to-date on the latest trends and changes in the industry. Our guide is a valuable resource for both candidates and clients looking to navigate the technology recruitment market in New Zealand and Australia.

As always, our team at Finite Recruitment is dedicated to providing expert advice and guidance to both our clients and candidates. We pride ourselves on our ability to stay ahead of the latest trends and developments in the market, and are always available to provide personalised support and assistance.

We are confident that the insights and information provided in this salary survey will be of great value to those looking to navigate the technology recruitment market in New Zealand and Australia.

Thank you for choosing Finite Recruitment as your partner in finding the right talent for your organisation. **We connect Great People!**

Sincerely,

*Tracy Thomson*

# New Zealand Auckland & Wellington

## What trends or challenges have occurred in the New Zealand tech talent market over the last 12 months?

The New Zealand technology market has continued to experience growth over the past 12 months, driven by an increasing demand for technology solutions across various industries. However, this growth has been accompanied by a number of challenges. One of the main challenges in the market has been the continued shortage of technology talent. The market's current state of in-demand technology skills, makes it difficult for organisations to find and hire the right professionals with the necessary experience and expertise.

In addition, with the shortage of technology talent, good candidates have a lot more choice when changing jobs, which can make it difficult for employers to attract and retain top talent. Candidates now look for interesting work and a good company culture, which are becoming increasingly important factors in their job search.

## What roles are currently in-demand in New Zealand?

The New Zealand technology market is currently experiencing high demand for a range of technology roles across various industries, including:

- Software Developers
- Business/Systems Analysts
- Cybersecurity
- DevOps
- Cloud
- Technical Support/Helpdesk
- Architects
- Project Management

## What are the salary trends in the New Zealand tech market?

The New Zealand technology market has seen a rise in salaries, driven by the shortage of technology talent and high demand for specific skills. The market is competitive with employers offering competitive compensation packages and additional benefits such as flexible working, career development, and additional leave to attract and retain top talent. However, salary trends vary by skills, experience, location, and role. Employers are also placing more emphasis on benefits offered, not just salary, to retain employees.

## What will happen with tech roles and salaries in New Zealand in the next 12 months?

The New Zealand technology market is expected to continue experiencing growth in the next 12 months, driven by the increasing demand for technology solutions across various industries. However, this growth will likely be accompanied by a continued shortage of technology talent. The demand for skilled professionals will remain high, but not likely to result in the same level of increase in salaries that has been seen over the past year. The trend is moving towards hiring permanent employees instead of contractors and this is likely to continue in the future.

# New South Wales

## What trends or challenges have occurred in the NSW tech talent market over the last 12 months?

Unsurprisingly, COVID has significantly changed the way tech companies are operating. Working from home and flexible arrangements have become the norm rather than the exception, and employers have needed to adapt.

Localised recruitment specialists have been impeded by travel restrictions. But, alongside a gradual return to more familiar conditions, there is movement in the tech jobs market. Although many clients of tech companies are looking for cost savings and demanding more for less, there is a significant candidate shortage in some key fields. Health, aged care and logistics are notable commercial growth areas, while banking and finance remain stable.

## What roles are currently in-demand in NSW?

COVID's requirement for remote contact and virtual meetings has lifted the demand for multi-skilled candidates able to think outside the box, with a particular focus on communication skills. Key areas of demand include development (DevOps, front end UI and UX), cloud technologies, data (BI, SSAS, SSIS), and infrastructure and security. There are also increased vacancies in non-technical service roles such as business analysis and project management.

## What are the salary trends in the NSW tech market?

There is a marked divergence in trends for permanent as opposed to contract roles. Remuneration for permanent roles has remained relatively stable, except for in-demand areas where applicants are in short supply. Contract rates, however, have risen, and it is anticipated that they will continue to sit at the high end of candidates' expectations.

## What will happen with tech roles and salaries in NSW in the next 12 months?

While salaries have not dropped, remaining generally stable, candidates seeking a higher level of remuneration, especially in permanent roles, may need to adapt to an increased workload and the development of a more diverse skillset.

We expect the hiring demand in NSW to remain very strong, particularly in the first half of 2023.

## What trends or challenges have occurred in the ACT tech talent market over the last 12 months?

The ACT technology market has experienced significant growth over the past 12 months, driven by the increasing demand for technology solutions across various industries. The shift to digitisation and the need for online environments has led to a high demand for highly-skilled technology professionals. As a result, we have seen a rapid increase in the salaries for these roles, with some positions seeing an increase of up to 20% in the last year alone.

However, despite the growth in the market, there have also been challenges. One of the biggest challenges has been the limitation of workforce mobility, which has added to the constraints that already exist in the government's onboarding and clearance processes. This has made it more difficult for organisations to find and hire the right professionals with the necessary experience and expertise.

## What roles are currently in-demand in ACT?

The ACT technology market is currently seeing high demand for a variety of roles. Candidates with strong skills and security clearance are in particularly high demand, as the need for secure technology solutions continues to grow. Cybersecurity professionals across all levels, from operations to strategy, are highly sought after. Other roles that are consistently in demand include project managers, business analysts and change managers. These roles are essential for organisations looking to implement and manage technology projects and digital transformation initiatives.

## What are the salary trends in the ACT tech market?

The ACT technology market is known for its heavy reliance on contract-based roles, and this trend is expected to continue in the coming year. Despite this, we have seen an increase in permanent role salaries, as organisations recognise the value of having a stable workforce. However, we have also seen a slight reduction in contracting rates across most roles. The decrease in contracting rates might be due to a shift towards more permanent roles, as organisations are looking for stability in their workforce.

## What will happen with tech roles and salaries in ACT in the next 12 months?

The ACT technology market is expected to see some changes in the next 12 months, driven by the Federal Government's plan to cut contractor spending by \$3 billion over four years and increase the permanent staffing caps. This is likely to result in a shift in the supply and demand for contractors, with a decrease in rates for some roles.

We have already seen a reduction in rates due to the recent contractor cutbacks in some of the larger Federal Government Departments, which has caused a large number of candidates to enter the market. As a result, we expect to see an increase in permanent technology roles within the Australian Public Service. Despite these challenges, highly-skilled contractors will always be in high demand in the ACT. Organisations will continue to seek out professionals with specialised skills and experience, and we expect conditions in the ACT to remain strong.

## Victoria

### What trends or challenges have occurred in the VIC tech talent market over the last 12 months?

The VIC technology talent market has seen a significant increase in demand for skilled professionals over the past 12 months. In particular, during Q1 and Q2, the demand for technology skills was extremely high, resulting in a highly competitive job market for job seekers. This competition has led to a significant increase in salaries for technology professionals, with some reports indicating increases of up to 30-40%.

This trend also led to increased competition among employers as they aim to attract and retain top talent, which includes offering attractive compensation package, flexible working arrangements, and benefits. Employers may also look to develop their own internal training and development programs to reskill or upskill their existing employees, rather than going through the recruitment process. Furthermore, with remote work as a norm, it provides new opportunity for hiring talent from different locations and reduced geographical limitations.

### What roles are currently in-demand in VIC?

The demand for top tech talent in VIC is surging, with a particular emphasis on roles such as Developers, DevOps, Business Analysts, and Cyber Security specialists. This is due to the ongoing digital transformation efforts of companies, the tight competition for skilled professionals, and the rising investments made in technology teams. Employers are seeking individuals who can take their technology teams to new heights and drive critical business transformations and changes.

### What are the salary trends in the VIC tech market?

Permanent salaries and contract rates have experienced a marked uplift from the start of the year, with some reports indicating increases of up to 20%. This trend was driven by high demand for skilled professionals in the market, as well as a shortage of available talent in certain areas. However, as the year progressed, the market began to plateau. This was primarily driven by economic uncertainty resulting from the ongoing pandemic and war in Ukraine, which caused some organisations to adopt a more cautious approach to hiring and spending. As a result, salary growth slowed in Q4, and the market reached a more stable state.

### What will happen with tech roles and salaries in VIC in the next 12 months?

The VIC job market is expected to cool following the strong hiring activity in recent years. Movement among job seekers has slowed and salary expectations have moderated. Factors such as inflation, rising costs of living, and job security are driving job seekers' motivations. The quality of projects, company culture, and benefits are becoming increasingly important in attracting top talent as the market tightens.

## Queensland

### What trends or challenges have occurred in the QLD tech talent market over the last 12 months?

We've seen a significant increase in demand for technology professionals with skills in cloud, data analytics, and cybersecurity. The trend towards digital transformation has accelerated during the pandemic, leading to increased demand for professionals with experience in these areas. Another challenge that has been seen in the QLD technology market over the last 12 months is a shortage of available talent. This has resulted in a highly competitive market for top talent, with many companies offering attractive compensation packages and benefits in order to attract and retain the best candidates, leading to an increase in salaries for in-demand roles and skillsets.

### What roles are currently in-demand in QLD?

In QLD, the technology market continues to experience growth driven by the increasing demand for technology solutions across many industries. As a result, there are currently several roles in high demand, including:

- Data-based roles such as Data Analysts, Data Scientists, and Data Engineers
- Project Services roles such as Project Managers, Business Analysts, and Change Managers
- Transformation roles such as Digital Transformation Specialists and Solutions Architects
- Cloud-based roles such as Cloud Architects and Cloud Engineers
- Cybersecurity roles such as Cybersecurity Analysts and Cybersecurity Engineers

### What are the salary trends in the QLD tech market?

In the QLD technology market, salary trends have been consistently pushing upwards in the past 12 months due to the shortage of technology talent in the market. This shortage has been exacerbated by the lack of migrant workers in the market, leading to a high demand for local talent. As a result, clients have been willing to pay market rates for the right candidates. However, as the market continues to evolve, we are seeing a shift in the industry, with more clients now setting budget expectations for roles. This means that while salaries may still be increasing, they may not be as high as they have been in the past as clients look to manage costs.

### What will happen with tech roles and salaries in QLD in the next 12 months?

In the next 12 months, the technology market in QLD is likely to continue to experience a high demand for technology roles, as multiple projects that were delayed due to the COVID-19 pandemic are expected to move forward. However, as the market begins to return to a more normal state, we may see a slight decrease in the number of new roles being created. Despite this, the high demand for technology professionals in the state is expected to continue, and we anticipate that salaries will remain competitive as employers compete for top talent. Additionally, with the lack of migrant workers still in the marketplace and the continued pressure on the market to supply talent, we anticipate that the market will remain tight in the next 12 months.

## South Australia

### What trends or challenges have occurred in the SA tech talent market over the last 12 months?

The South Australian technology talent market saw a surge in contract recruitment at the beginning of 2022 as clients sought to staff projects and meet deadlines. However, as the year progressed, a shift towards permanent recruitment occurred as clients aimed to reduce costs and retain intellectual property. This has created a solid year for recruitment businesses in both the contract and permanent markets, but also highlights the challenges faced by organizations in a competitive and dynamic talent market. In the coming months, it will be important for organizations to stay informed and up-to-date on industry trends to attract and retain top talent.

### What roles are currently in-demand in SA?

The current demand for technology roles in SA continues to be high, with certain roles standing out as particularly in-demand. Software development remains a key area of focus, with a wide range of skills in high demand, including but not limited to front-end, back-end, and full-stack development. Additionally, roles in project services, such as Business Analysts and Project Managers, are also in high demand as organisations look to deliver projects on time and on budget.

Architecture roles are also on the rise, as organisations look to design and implement more robust and scalable technology solutions. The increasing importance of cybersecurity has also led to a high demand for professionals with cybersecurity skills, including network security, incident response, and threat intelligence.

### What are the salary trends in the SA tech market?

The SA technology market has seen some notable changes in salary trends over the last year. In 2022, contract rates in the technology sector reached an all-time high as organisations struggled to staff projects and meet deadlines.

While contract rates have plateaued, we have seen a slowing in the rate of increase for permanent salaries. This is likely due to the increased supply of candidates entering the market as organisations shift away from contract roles and towards permanent ones.

### What will happen with tech roles and salaries in SA in the next 12 months?

In the next 12 months, we predict the technology market in SA will experience a split, with a tough first half followed by a boom in the second half. Despite high employment levels in the tech sector, the market remains a candidate-short market for both contract and permanent roles. Employers will need to stay informed to attract and retain talent, while candidates should be aware of the shifting market and consider both contract and permanent opportunities.

## Western Australia

### What trends or challenges have occurred in the WA tech talent market over the last 12 months?

In the past 12 months, the technology market in WA has seen significant growth, with a reported increase of circa 16% in the number of West Australians working in the IT sector. This growth is expected to continue in the next five years. Additionally, the mining sector is becoming a major player in the technology industry, with the sector's IT workforce growing by 30%+, a significant increase from the previous year. This growth in the technology sector in Western Australia presents both opportunities and challenges for employers and job seekers in the industry.

### What roles are currently in-demand in WA?

The top in-demand roles currently are Cybersecurity Analysts, Network Engineers, Project Managers, and Enterprise/Solution Architects. These roles reflect the need for organisations to secure their networks and data, as well as the need for experienced professionals to manage and implement technology projects and solutions.

As the market continues to evolve, we expect to see continued demand for these roles, as well as others that align with the latest technological trends and advancements.

### What are the salary trends in the WA tech market?

Salaries for specialists and candidates with niche skills have seen steady growth over the past 12 months. This is due to the high demand for these specialised skills and the limited supply of candidates with these abilities. Additionally, professionals with multiple cloud technology and broad cloud migration experience have also seen an increase in their salaries, as these skills are in high demand as more and more organisations are moving to cloud-based systems.

Other sectors of the market, however, have seen more stable salary trends, remaining consistent with previous years. This may be due to a more balanced supply and demand for these skills in the market. It is important to note that salary trends can vary based on the specific roles, skill-sets and industries, and this information should be taken as a general trend rather than an absolute.

### What will happen with tech roles and salaries in WA in the next 12 months?

We have seen a significant increase in demand for highly skilled and niche technology roles, particularly in the resources industry where there is a drive towards technical innovation in areas such as autonomous drilling, remote operations and drone technologies. Candidates with relevant skills in these areas continue to be in high demand and command high salaries, particularly those who are willing to work in remote areas.

Perth has also seen a growth in the number of successful tech start-ups, leading to a high demand for software developers. Additionally, the market has been impacted by the COVID-19 pandemic, with the shift towards remote working opening up opportunities for those with skills across a range of technologies, as employers are becoming more flexible with location.
